

# Setting yum server the easy way

---

1) we mount the cdrom in the /media folder

=> **mount /dev/cdrom /media**

2) create a directory in the / directory name “/myrepo”

3) copy the whole file in the cdrom in the “/myrepo”

=> **cp -r /media/\* /myrepo**

4) go to /etc/yum.repos.d

**[root@localhost ~]# cd /etc/yum.repos.d/**

5)[if you want to keep only local you can delete rest of the file in the folder  
]

create a file name “**myrepo.repo**”

=>**vim myrepo.repo**

---

```
[myrepo]
baseurl=file:///myrepo
enabled=1
gpgcheck=0
```

---

5) update with this command

**[root@localhost ~]# yum update --disablerepo="\*" --  
enablerepo='myrepo'**

6) install packages

**yum install --disablerepo="\*" --enablerepo='myrepo' <package name>**
