

SETTING IPA CLIENT ON CENTOS

step1: setting up a static ip address for the server and the host

1) In this lab the client address is 10.0.0.2

[see the ip address section for the process of giving a static ip address]

2) `hostnamectl set-hostname ipaclient1.linux99.com`

3) `vim /etc/hosts`

`10.0.0.2 ipaclient1.linux99.com`

4) `nmtui`
`dns 10.0.0.1 // <ipa server dns>`

5) `nmcli device down <NIC/device> / ifdown <NIC>`

6) `nmcli device up <NIC/device> / ifup <NIC>`

7) `ping 10.0.0.1`

8) `yum install ipa-client`

9) `ipa-client-install [yes]`

- authorize enroll computer : admin
- password : open12345

10) `authconfig --enablemkhomedir --update`

11) `systemctl enable sssd`

12) `nslookup ipaclient.linux99.com`
