

TELNET SERVER IN UBUNTU

Telnet server install (server side configuration steps)

1) install the telnet client and the telnet server

=> **apt install telnetd xinetd -y**

2) restart xinetd service

=> **systemctl restart xinetd**

The service should be fired-up automatically once the installation is done.

3) check the service status

=> **systemctl status xinetd**

4) Enable Telnet in Firewall .Telnet works at port **23**. so add the port

=> **ufw allow 23**

=> **ufw reload**

[root login is disabled by default]

This is the end of server side configuration

Telnet install (Client side configuration steps)

1) install the telnet client

=> **apt install telnet -y**

2) Connect to the system

=>**telnet <server_ip_address>**

example:

=>**telnet 192.168.0.100**
